EFFLORESCENCE STAIN REMOVER

CC0008

Revised July 2001

DESCRIPTION

Bondall Efflorescence Stain Remover is a phosphoric acid based product designed to remove the unsightly white stains (calcium carbonate) that appear on brickwork, pavers, concrete work and rammed earth blocks prior to sealing with Bondall Clear Paving Sealer or Bondall Natural Finish Waterproofing Sealer.

It can also be used as an etching agent for concrete prior to coating the surface.

FEATURES AND BENEFITS

- Easy to apply and use
- Fast acting
- Doubles as an etching agent for concrete
- Customer gets value for money.

SURFACE PREPARATION

Remove as much efflorescence as possible using a damp cloth prior to using the product.

APPLICATION

- * Saturate area to be treated with water but do not allow to pond on the surface.
- * For lightly affected areas apply diluted Bondall Efflorescence Stain Remover 1:1 with water and work in with a stiff brush. Allow to stand for 2-5 minutes before washing down thoroughly with water. Do not allow product to dry fully on this surface before washing down.
- * On badly affected areas apply Bondall Efflorescence Stain Remover undiluted. A second application may be required with a diluted solution of Bondall Efflorescence Stain Remover 1:1 with water.
- * Some oxide-coloured concrete may be affected with neat application. When applying near lawns and gardens, be careful not to splash onto plants. Do not allow product to splash onto aluminium or metal surfaces. Should this happen, immediately flood the area with water to neutralise Efflorescence Stain Remover.
- * Ensure adequate ventilation during use.
- * On vertical brick surfaces, try to avoid contact with mortar joints. It is important to saturate these joints with water. Thoroughly rinse the surface after application.
- * Apply Bondall Efflorescence Stain Remover in manageable sections ie 1m² at a time.

THINNING

Bondall Efflorescence Stain Remover 1:1 with water for lightly affected areas.

COVERAGE

Bondall Efflorescence Stain Remover will treat approximately 8-10 square metres per litre when diluted as above.
Coverage rates are dependant on surface porosity, texture and application technique.

DRYING TIME

It is important not to allow product too completely dry on the surface as this may cause re-depositing of soluble salts.

CLEAN UP

Clean all equipment promptly with warm water and a little detergent followed by a fresh water rinse.

COLOUR

Clear liquid

SIZES

2 Litre and 5 Litre Containers

PRECAUTION/FIRST AID

It is recommended that normal personal protective clothing should be worn, including coveralls, impervious gloves and goggles. Avoid unnecessary skin contact and inhalation – use a suitable respirator if spray application is employed.

If poisoning occurs contact a doctor or Poisons Information Centre on 13 11 26. If swallowed do not induce vomiting; give a glass of water. If skin contact occurs remove contaminated clothing and wash skin thoroughly. If in eyes hold open and flood with water for at least 15 minutes and see a doctor. Refer to MSDS for full details.
