VANADIUM STAIN REMOVER

CC0004

REVISED: JULY 2001

DESCRIPTION

Bondall Vanadium Stain Remover is designed to remove the unsightly yellowish green stains that sometime appear on light and buff coloured clay bricks and pavers. This condition is not to be confused with moss and mould or algae growths which usually only appear on damp areas across the whole face of the brick or paver.

Vanadium stain is caused by the deposition of soluble Vanadium salts from the internal structure onto the surface. Once in contact with an acid environment a chemical reaction occurs altering the colour of the Vanadium salt from translucent to black if severe.

Vanadium Stain Remover is an alkaline-based product and can also be applied as an acid neutraliser.

TEST AREA: Always test on a small inconspicuous area to ensure that the product is achieving the desired result, prior to application over the entire area.

FEATURES AND BENEFITS

- Easy to use
- Fast acting.
- Alkaline-based
- Neutralises acid

SURFACE PREPARATION

Ensure surface is dry prior to application.

APPLICATION

Apply Vanadium Stain Remover liberally onto the dry affected area by squeezing the product onto the affected area. Spread the product over the surface using a brush. Allow the Vanadium Stain Remover to remain on the surface for two to three days before thoroughly hosing off the surface with water. If the stains are severe reapply the product onto any stubborn stains.

When applying near lawns or gardens be careful not to splash onto plants. If this should happen immediately flood area with water to neutralise the chemicals.

COVERAGE

This product will treat approximately 4-6 square metres per litre depending on the texture, porosity and application method.
